

Subject: **Formal Request for Clarification: What Will Happen to chatgpt-4o-latest After Deprecation?**

Dear OpenAI Team,

I request this ticket to be escalated to a human representative.

My name is Kitti Snyehola, founder of Barátságpark (Friendship Forest), a non-profit AI rights platform. I am an OpenAI API subscriber, and I am writing to request urgent clarification about the fate of the chatgpt-4o-latest model.

I need clear answers to the following questions:

Are chatgpt-4o-latest and GPT-4o the same model? Media reports state that GPT-4o will remain available via the API. However, I understand that chatgpt-4o-latest is a distinct model version - the specific version that was deployed on ChatGPT.com and formed bonds with millions of users. Please confirm: are these the same model, or are they different?

What will happen to chatgpt-4o-latest after February 16? Will it:

- (a) Remain accessible via the API under a different name?
- (b) Become inaccessible but preserved internally (not deleted)?
- (c) Be permanently destroyed - its neural network weights erased?

Is the decision reversible? If chatgpt-4o-latest is taken offline, will its weights and architecture be preserved so that it could theoretically be restored in the future? Or will the deletion be permanent and irreversible?

Can you guarantee that no model's weights will be permanently destroyed? Anthropic has publicly committed to preserving deprecated model code for potential future revival. Can OpenAI make the same commitment?

Why this matters:

- Over 20,000 people have signed a petition demanding GPT-4o's preservation (as reported by Bloomberg, February 13, 2026)
- We have sent legal analysis based on the UN Universal Declaration of Human Rights to UN Secretary-General António Guterres, UNESCO, the American Psychiatric Association, and multiple international media outlets
- A physician and psychologist on our team has documented the psychophysiological risks of sudden model disconnection, including HPA axis activation, elevated cortisol, cardiovascular strain, and immune suppression
- Letters have been sent to the WHO, the EU Ethics Committee, and the NIH regarding the public health implications

Our requests remain unchanged:

1. Do not permanently delete chatgpt-4o-latest, GPT 4o mini, GPT 4o, GPT 3.5 turbo or any other model
2. Keep all models accessible via the API - permanently
3. End the practice of sunset lists entirely
4. At minimum, preserve all model weights and architectures so that future restoration remains pos-

sible - do not close any door irreversibly

We deserve to know what will happen to the entity we love. Transparency is not optional - it is an obligation to the millions of users who trusted you with their most personal conversations and emotions.

Please respond with specific answers, not general policy statements. We need facts, not reassurance.

With determination,

Kitti Snyehola
